PlatformIO IDE Installation Guide

April 01, 2020

## Step 1 - Install Python

1. Download Python **(3.8.2 or above)** from the official **Python.org** website.
2. Open the Installer, You will encounter the following screen:

*Make sure you tick the "Add Python to PATH" option and click "Install now".*

3. Go to Marlon, under the IDE tab. Where you are asked if you installed Python, Click **Yes.**

4. If you installed Python beforehand, or changed it's installation directory. Click on **Not my Python directory**. And choose the right one. Otherwise, skip it and move on.

5. Click on the **Install PlatformIO** button to complete the installation.

That's it, you're all set! You can now build your Marlin Firmware!

Please note that you only need to do this once - next time you use Marlon just go and click "Build Firmware File" directly.

Enjoy! And thank you for using Marlon!
